PROFESSIONAL SUMMARY

Data analyst who moved from consuming a reporting layer to building one. Since December 2022, dashboards, ad hoc analysis and stakeholder reporting across five business domains. Since early 2026, part of the team building the company's first data warehouse on Google Cloud, and sole owner of one data mart end to end, from Python ingestion through layered Dataform modelling to the dashboards it serves. Nine years at one employer, promoted from operations into data.

PROFESSIONAL EXPERIENCE

Booth (formerly Booth & Partners), Makati, Philippines

September 2017 – Present

Data Analyst

December 2022 – Present

- Delivered the Client Data Mart end to end as sole owner within the company's 2026 data warehouse build: Python ingestion, layered transformation in Dataform following a medallion architecture (bronze raw declarations, silver staging, then dimension and fact models, mart and reporting tables), Cloud Run scheduling, and the dashboards served from it.
- Helped design and build that warehouse on Google Cloud from the start of 2026, contributing to the data model, architecture, security and governance decisions, then building ingestion, transformation and scheduling for Talent Acquisition, the first domain taken on.
- Built and maintained dashboards within a team portfolio of 10 to 20 across sales, operations, people, talent acquisition and client reporting since December 2022, plus ad hoc analysis for internal teams and executives, so each area worked from one consistent reporting layer.

Team Leader

December 2020 – November 2022

- Led a finance team covering accounts payable, accounts receivable, and credits and adjustments for US, Canadian and Australian accounts.
- Tracked the team against its KPIs from operational reports and throughput, and stepped in when targets were at risk, keeping performance at or above them.
- Produced daily, monthly and quarterly reports on team performance for internal stakeholders and clients.

Senior Accounts Payable / Accounts Receivable Specialist

April 2019 – November 2020

- Owned credits and adjustments and resolved vendor disputes, keeping the accounts database accurate and payments processed on schedule.
- Produced monthly and quarterly financial reporting for finance stakeholders.

Accounts Payable / Accounts Receivable Specialist

September 2017 – March 2019

TaskUs Inc., Bonifacio Global City, Philippines

May 2015 – April 2017

Email Support Representative

- Resolved customer queries, returns and complaints by email within service-level targets.

PROJECTS

Formula 1 Analytics Pipeline

2026

github.com/lemybetheone/f1-analytics-pipeline

- Built an end-to-end analytics pipeline independently: every Formula 1 season since 1950, extracted from a rate-limited public API, landed once in AWS S3 and loaded into PostgreSQL with idempotent upserts, then modelled as a tested Kimball star schema in dbt. Any reload replays from S3 at zero API cost.
- Wrote a dbt test reconciling derived championship points against official standings, which exposed that sprint points were missing entirely: 437 official against 399 derived for the 2024 season.
- Orchestrated the nightly refresh with Apache Airflow in Docker using per-task retries, dead-letter capture and failure reporting, so the pipeline runs unattended, with linting and tests enforced on every push by GitHub Actions.

TECHNICAL SKILLS

Languages: Python, SQL

Cloud and Warehousing: Google Cloud Platform (BigQuery, Cloud Run), AWS S3, PostgreSQL

Transformation, Orchestration and BI: Dataform, dbt, Apache Airflow, Zoho Analytics, Looker Studio, Metabase

Engineering Practice: Dimensional modelling (Kimball), medallion architecture, data quality testing, Git, GitHub Actions, CI/CD, pull-request workflow, Docker

EDUCATION

Pamantasan ng Lungsod ng Maynila, Manila, Philippines

2015

Bachelor of Science in Business Administration, Finance and Treasury Management
